Manual Smart App
for EL.BEDIENING.23 and -.24

Install App

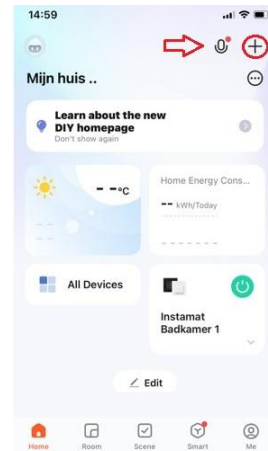

Download the app "Tuya Smart" in the Playstore / Appstore and create a new account or log in with an existing account.

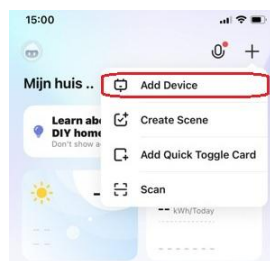

INSTAMAT WARMTECHNIEK BV
Spinfondsweg 15, 8171 NT Vaassen
Mail: info@instamat.nl – Web: www.instamat.nl

Add and connect EL.BEDIENING.23 or -.24

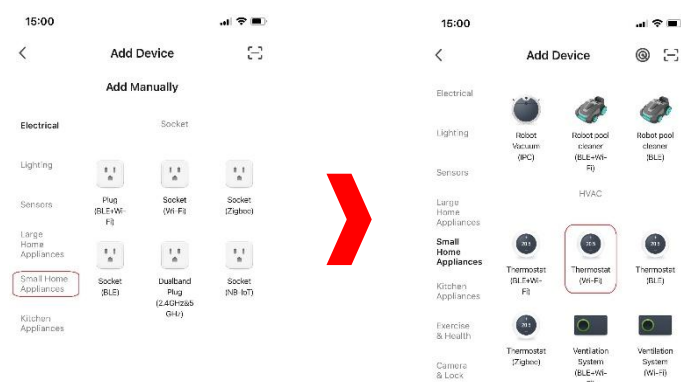

- After logging in, the app opens the home screen: 'My family'
- Add a device by pressing the "+" at the top right.

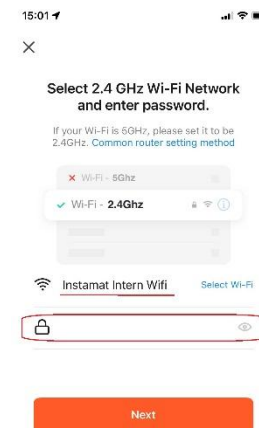

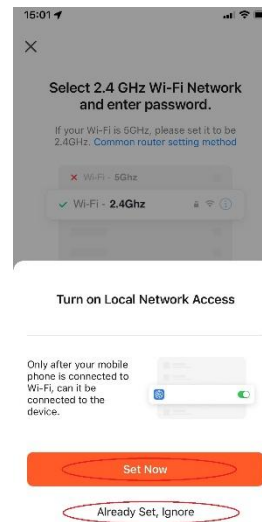

- Select 'Add Device'

- Select 'small household' and tap the 'Thermostat wifi'

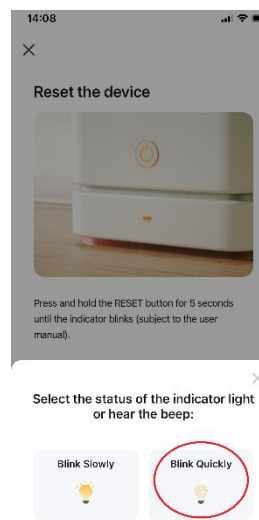

- Make sure your WiFi network is set up correctly, select the relevant 2.4 GHz WiFi network and enter the password of this WiFi network.

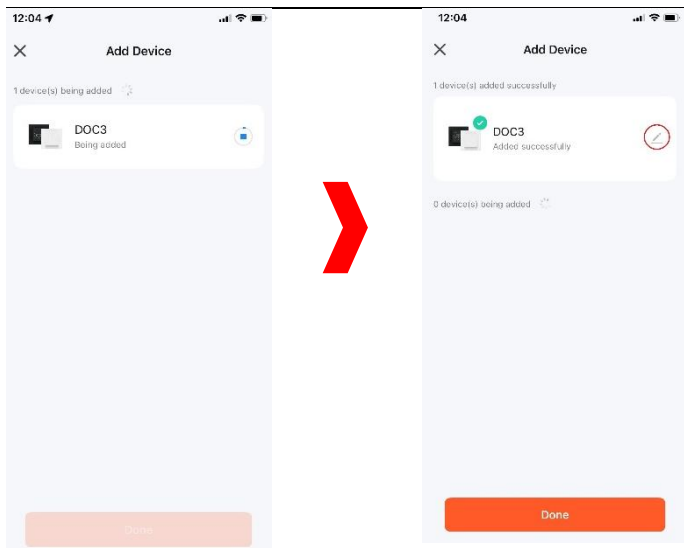

The following step is on the thermostat itself;

- Hold the function key until the wifi icon appears in the top left of the display; 
Now press the 'plus key' once to put the thermostat in connection mode. The wifi icon will now flash.

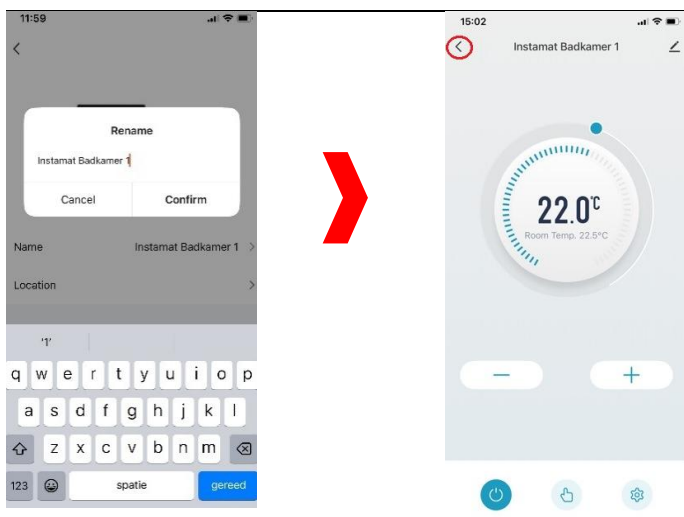

- Now confirm in the app that the indicator is blinking quickly.

- The thermostat and app are now being connected. When the wifi icon on the thermostat stops flashing, the connection is successful.

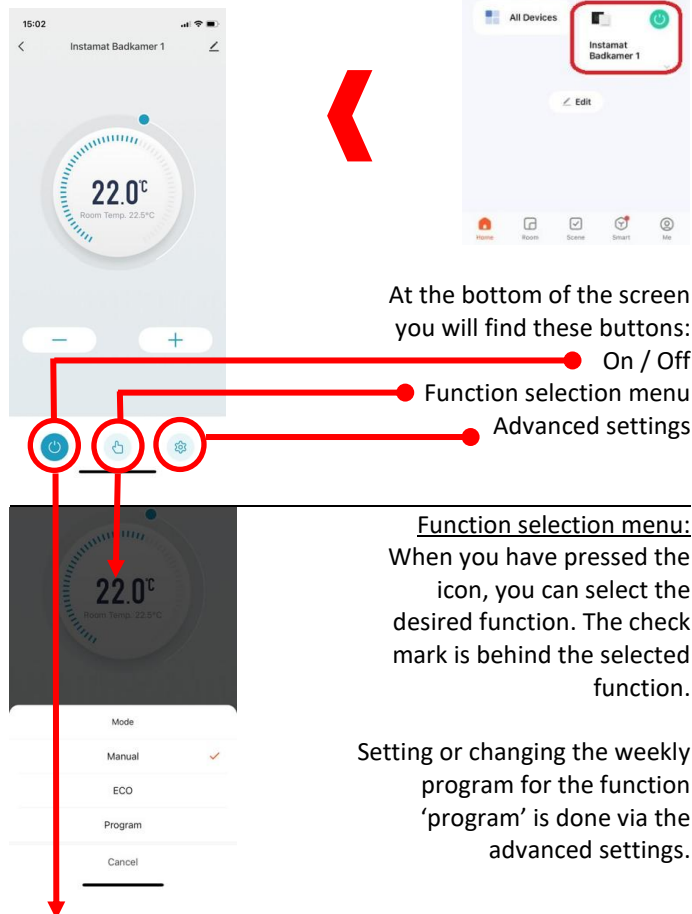

- Press the 'pencil' and give the thermostat a name. Click on 'done' to add the thermostat. You will now automatically go to the thermostat's operating menu in the app.
- Now tap on the "<" to return to the app's home screen. The 'named thermostat' is now in the list of devices.

Control and settings of thermostat via Smart App

Open the app and tap on the thermostat in question.

You will now enter the thermostat's operating menu.

At the bottom of the screen you will find these buttons:

- On / Off
- Function selection menu
- Advanced settings

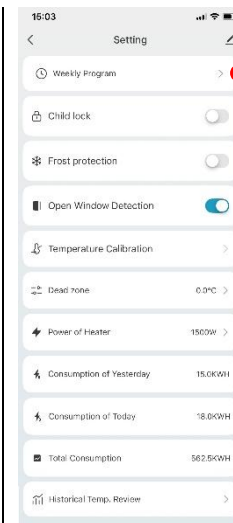

Function selection menu:

When you have pressed the icon, you can select the desired function. The check mark is behind the selected function.

Setting or changing the weekly program 'program' is done via the advanced settings.

On / Off:

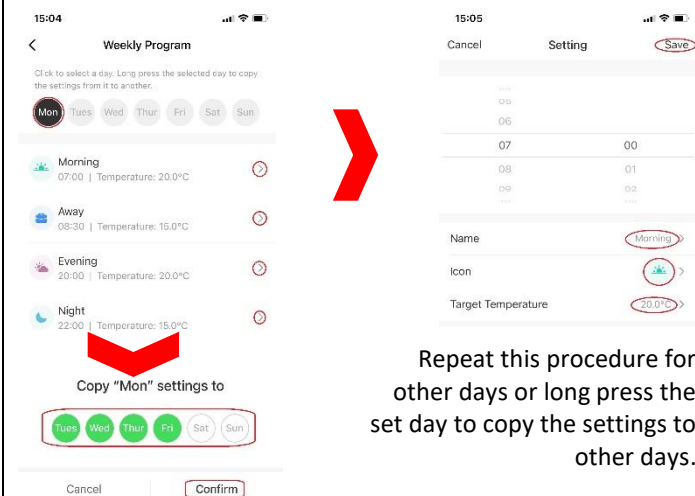

Here you can turn the thermostat on and off. When the thermostat is on, you can adjust the requested temperature on the screen by pressing the '+' and '-' keys. This temperature remains valid until the next command, unless the 'program' function is active, then this changes automatically at the next switching moment.

Set weekly program (via advanced settings)

Open 'weekly program' from the menu:

- Select the day you want to set/change
- You can set 4 switching moments per day. For each moment you can program the following; Start time, name, icon and target temperature.
- Program all 4 switching moments and save.

Repeat this procedure for other days or long press the set day to copy the settings to other days.

Note: (Re)activate the weekly program by (re)selecting 'program' in the function selection menu.

*Advanced settings:
After pressing the icon, this menu opens.

Here you can change settings as can be read in "EL.BEDIENING.23* en -.24* Manual Radiator"

Make sure that 'power of heater' is set correctly to get a correct indication of consumption.
